DESCRIPTORS \*Data Collection; Kindergarten; \*Preschool Children; Statistical Data; Tables (Data); \*Vocabulary Skills; \*Word Frequency; \*Word Lists

ABSTRACT

This study contains a rank-ordered listing of 1,000 most frequently occurring words accompanied by the percentage and cumulative percentage of language production accounted for by individual words and groups of words. The data are based on eight preschool word frequency counts ranging in date of appearance from 1928 to 1971. One of the advantages of this list is that it yields a more reliable frequency scaling based on a total number of almost 2 million words; at the same time the data are presented in such a way that studies considered not suitable for a particular use may be omitted. This study contains a rank-ordered listing of 1,000 most frequently occurring words accompanied by the percentage and cumulative percentage of language production accounted for by individual words and groups of words. The data are based on eight preschool word frequency counts ranging in date of appearance from 1928 to 1971. One of the advantages of this list is that it yields a more reliable frequency scaling based on a total number of almost 2 million words; at the same time the data are presented in such a way that studies considered not suitable for a particular use may be omitted.

## A COMPILATION OF PRESCHOOL CHILDREN'S WORD FREQUENCY COUNTS

Murray A. Newman  
Southwest Educational Development Laboratory

Bruce E. Bailey  
University of Texas at Austin

Since the International Kindergarten Union List appeared in 1928, more studies have been conducted which present word frequency data based on the speaking vocabulary of preschool children. These studies have several audiences. Teachers of kindergarten and the early elementary grades use word lists as a reference for their own vocabulary use with children, as a source of words whose meanings children should know, in the introduction of reading vocabulary, in the construction of spelling and writing lists and as a check on textbooks for beginners. Writers working with early curricula, especially in such areas as oral language and reading, have a definite need for lists which scale words for frequency of usage. Researchers working with young children use word lists in cognitive, linguistic, verbal learning, and cross cultural studies and in instrument development.

In this study eight preschool word frequency counts are presented which range in date of collection from 1928 to 1971. Three of the studies<sup>1</sup> (I.K.U., 1928; Hodgkins, 1947; Weaver, 1955) recorded the spontaneous vocabulary of children in the kindergarten setting. Four other studies (Battit, et al., 1954; Corcoran et al., 1955; Cullinan et al., 1956; Kolson, 1960) used a variety of conditions to encourage

---

<sup>1</sup>Only the KINDERGARTEN section of the International Kindergarten Union List was included since the other two sections (PICTURE and HOME) were not listed in frequency form.

conversation such as pictures, films and topics as stimuli and play periods at home. The data from the remaining study<sup>1</sup> (Newman, 1971) were collected under conditions in which children responded with associations in sentence form to frequently occurring words. Most of the children used in these studies were kindergarteners (I.K.U., 1928; Corcoran et al., 1955; Weaver, 1955; Cullinan et al., 1956; Kolson, 1960; Newman, 1971) with the others fitting in the 2-5 year old (Hodgkins, 1947) and 3-6 year old (Battit et al., 1954) age ranges. The regions of the country represented in the samples were the South, East, West and Middle West states (I.K.U., 1928), the New England states (Hodgkins, 1947; Battit et al., 1954; Corcoran et al., 1955; Cullinan et al., 1956), California (Weaver, 1955), Pennsylvania, Oregon, and Washington<sup>D.C.</sup> (Kolson, 1960) and Texas (Newman, 1971). With few exceptions the word counts were based on white middle class children.

Since these word counts were collected under a variety of conditions and since the total number of running words for any one study is relatively small, the studies by themselves are only moderately reliable, this being a drawback for persons interested in fine measurements on an important segment of words such as the 500 or 1,000 most frequently occurring words. One of the obvious advantages of the present word list is that it yields a considerably more reliable frequency scaling based on a total number of almost 2 million words; at the same time the data are presented in such a way that studies considered not suitable for a particular use may be omitted.

The data are presented in the Appendix. The words were rank-ordered according to their total frequency and a percentage was computed for each word based on its total and the total number of running words added across all of the studies. Words

---

<sup>1</sup>Not all of the data from Newman were in an accessible form for use in this study.

with a total frequency of six or less were not included. Perhaps the most interesting feature of this listing is that of the cumulative percentage column. Reflected in this column is the amount of language production accounted for by a particular group of words. For instance, the cumulative percentage column indicates that the first 10 words account for 22% of a preschool child's speaking vocabulary, which is to say that these words will appear approximately 220 times in every 1000 words of conversation. It is important to notice the high percentages of production that are accounted for by relatively small groups of words; more specifically, 25 words account for 33% of production, 100 words for 57%, 500 words for 79%, and 1000 words for 86%.
